/172 cont./

000 the more uncertain I am in abstracting the common features. The
171 Kustenaú has his foot and half of his lower thigh painted red, like
302 stockings; the upper thighs are covered with a sooty black, in which, however, arched stripes are left blank. On his back he has two red stripes, and in addition black arm-bands. Numerous scratches, which are made with the tooth of the peixe-cachorro
302 (dogfish). The Bakaïrí, too, are painted more than usual with
[531] red; one has a black stripe on either side from eye to ear; another has painted himself black over the middle of his forehead, nose, lips, and chin, and bright brick-red on the sides of the forehead and the face. Among some, the hair, too, is saturated with the
301 red oil. Below the knees are bands of /Illustration appears here/ /173/ buritĭ straw; a skein of cotton, colored a dirty reddish brown, is tied around the waist. Some have strings or bands of cotton wound over the ankles or under the knees, around the legs, or around the upper arms. There is no uniformity anywhere.

302 The tonsure is shaved with a bent piece of spear grass. Its
● 413 diameter is seven centimeters.

177 To our surprise we also found an iron chisel tip and on a child a little string of blue beads. We could not find out definitely
[721] how these had found their way here; I interpreted their description and Antonio's unclear account to mean that they had been brought back from a tribe on the lower Paranatinga whom the grandfather had visited on a raiding expedition.

276 Even in Aldea II the men had become happily excited by the discovery of tobacco seed; smoking was also done here. The leaves were so dry that they could be rubbed almost to powder; they were rolled into cigarettes about two decimeters long, and the fresh green leaf of an unknown tree was split lengthwise and used as the wrapping. This wrapper burned with a pleasant, balsam odor. The smoke was inhaled.

262 The wómen made excellent beijú; it tasted like fresh French rolls. We also ate a fish ragout à la coquille, of which we would have liked to have had more than they gave us.

placed in a hole in the septum of the nose, so that the feathers swung one on each side of the head. Although the *páiko*, or scratcher, was not strictly an ornament, it is mentioned here because it had ritual meaning. The *páiko* was made by setting fish teeth into a gourd holder and was used for scarifying the skin of the arms, legs, chest, and back so as to cause bleeding. The wounds were first washed with water and later smeared with the juice of the *mukúna* vine. The *páiko* was used by boys and girls during puberty seclusion and by adults who had sores on their bodies. It was believed that the use of the *páiko* made people strong and healthy. As far as could be ascertained the Bacairí did not mutilate the teeth, genitals, or other parts of the body. There was no sign of tattooing, but pubic hair was carefully pulled out by both men and women. Formerly the Bacairí kept large birds, believed to belong to the eagle family, in their villages for their feathers. The Brazilians call the bird "harpía" and claim that it is still kept by the Indians in the Xingú Basin. The "harpía" was captured by shooting it with a blunted arrow, and it was kept in a special hut and fed. Villages often had several of these birds in captivity, the feathers being used particularly for feathering arrows. Parrots and macaws were also kept, their feathers being used only for ceremonial decorations.

SUBSISTENCE ACTIVITIES

Vegetable foods formed the basis of Bacairí diet, with fish and meat taking second and third places. The principal animals hunted were monkeys, deer, wild pigs, tapir, and the jaguar. The jaguar, however, was not eaten, but was hunted for its skin, teeth, and claws. The principal weapon used was the bow and arrow. Hunters would stalk game alone or in groups with the aid of dogs driving game into water or into steep rocky enclosures. There is no mention of the spear being used, but deadfalls and pitfalls were used. Many varieties of large fish were shot with the bow and arrow, either from canoes or from the river bank. Lizards, turtles, and a wide variety of wild fruits, roots, tender shoots, and honey were collected at certain seasons of the year.

The major part of the food supply, however, was obtained through agriculture. The Bacairí cultivated bitter manioc, *ópa;* sweet manioc, *taisí;*
